

Acomat 615 H4

» *mobile*

» *ideally suited for cardboard and recovered paper*

» *detachable hook receiver for mobile transport*

» *60 t pressing force*

Properties

- » suited for pressing: paper, cardboard, printing waste, foil
- » vertical stamp and oil cooler as standard equipment
- » channel adjustment - 3 sides, hydraulic-automatic
- » abba-drill machine and thrust station pivotable for service and cleaning
- » hook receiver, according to DIN
- » suitable for small to medium sized material traffic
- » photocell control in the filling chute
- » feed hopper as needed
- » operator side freely selectable
- » simple operation via touch panel

technical data

pressing force [kN/t]	600/60		
specific pressing force [N/cm ²]	78		
motor (kW)	15	22	30
throughput cardboard B19, approx. [t/h]	2,1	2,6	4,2
volume idle running [m ³ /h]	103	175	198
volume-working conditions [B19 m ³ /h]	66	76	120
cycle time [sec]	40	25	20
feed opening W x L [mm]	1140 x 1500		
tying system	horizontal, 4-fold, automatically		
bale size W x H x L [mm]	1080 x 750 x 1200		
bale weight, paper, cardboard [kg]	approx. 450 - 500 kg (depend on input weight and material material)		
machine weight [kg]	approx. 7800		

Abba – Environmental and press technology. Channel baling presses at a top price-performance ratio.

We from abba-press technology, are manufacturers of fully automatic channel baling presses with horizontal and vertical tying system. Our fully automated, mobile channel baling presses are distinguished by a high throughput with low energy consumption and easy operation.

Another characteristic of our channel baling presses is the compact and simple design (arrangement of the press cylinder advantageously crossed) with dependable cutting and drill station. Our channel baling presses are ideal for compressing: corrugated paper and board from commercial premises, de-inking, mixed-waste-paper, corrugated paper of all other kinds, films (landscape films); PET bottles, hard plastic, beverage cans etc.
